SUMMARY

Lead Software Developer with extensive .NET/C# and Azure expertise. Delivered an offline-first inspection app in .NET MAUI Blazor Hybrid used daily by 300+ field technicians, and built C#-SQL pipelines that saved a full day of payroll work each week. Specialized in modernizing legacy systems, creating micro-service integrations, managing Azure DevOps workflows, and automating operational processes.

TECHNICAL SKILLS

- **Languages:** C#, SQL, JavaScript, TypeScript, Python
- **Backend & Cloud:** .NET (Core & Framework), Web/REST APIs, Azure (App Service, SQL, Functions, Data Factory, Logic Apps, Maps), Microservices
- **Frontend & Mobile:** Blazor (WASM/Hybrid), React, .NET MAUI, Xamarin.Forms, Offline-first architecture (SQLite)
- **Data & Integrations:** Entity Framework, SSRS, SSIS, ETL pipelines, Salesforce integration (SOQL)
- **Practices & Tools:** Azure DevOps, Git, CI/CD, Agile/Scrum, Code Reviews, AI-Assisted Development (GitHub Copilot, ChatGPT, Gemini)

EXPERIENCE

Silco Fire & Security

Jan 2020 - Mar 2026

Lead Developer

Cincinnati, OH

- Led the transition of an offline-first inspection application into .NET MAUI Blazor Hybrid. The app is used daily by 300+ field technicians for reliable local data capture and synchronization.
- Managed Azure DevOps work items, repositories, pull requests, code reviews, and release workflows to support planning, collaboration, and controlled delivery across internal development projects.
- Modernized legacy .NET Framework applications to .NET 8, delivering the front-end with Blazor and React, which reduced page load time by about 30% and enabled faster feature releases.
- Built a secure web intake workflow and implemented Azure Functions microservices to integrate Salesforce with Azure Maps while keeping credentials secure and business logic separated.
- Engineered C# and SQL data pipelines to automate weekly commission calculations, eliminating manual bottlenecks and saving the payroll team a full day of work each week.
- Rewrote a complex legacy SQL cost allocation model to improve financial reporting accuracy, cutting data processing time by an entire week per financial cycle.
- Architected Azure backend services (App Service, REST APIs, Azure SQL) to support high-volume inspection workflows and operational reporting.
- Built and maintained ETL pipelines via Azure Data Factory and Logic Apps to streamline HR imports.
- Mentored junior developers and led code reviews to establish consistent engineering standards and improve the team's delivery speed.

Robert Half Technology

May 2019 - Jan 2020

IT Consultant

Cincinnati, OH

- Engineered a multilingual franchise job posting platform utilizing .NET and Entity Framework Code-First, scaling the application to support operations across 1,000+ franchise locations.
- Built feature updates for a high-traffic career platform using .NET, C#, and Git, adding new search filters and mobile-responsive layouts that increased user engagement and reduced page load time.
- Integrated a secure subscription payment processing system featuring real-time currency conversion APIs, enabling reliable international financial transactions across the platform.

Freelance

Aug 2016 - Present

Freelance Web Developer

Cincinnati, OH

- Designed and built an OSHA reporting application with dynamic questionnaire workflows using ASP.NET Core, Entity Framework, and Azure App Service, enabling users to complete compliance reports online.
- Developed a football broadcasting platform originally in C# MVC, then migrated it to React with a NoSQL backend (Azure Cosmos DB), improving load times and supporting live streaming.
- Delivered marketing, e-commerce, and event-management platforms built on ASP.NET, C# MVC, and Azure SQL, hosted on Azure App Service, which streamlined client operations and increased online sales.

Clarke Fire Protection Products

Dec 2015 - May 2019

Software Developer

Cincinnati, OH

- Built and maintained ASP.NET (MVC and Web Forms) web applications utilizing C#, JavaScript, jQuery, and Bootstrap.
- Engineered a custom WPF desktop application integrated directly with laser printing hardware, automating the production of thousands of compliance nameplates for globally distributed fire pump drivers.
- Developed Xamarin mobile applications that accessed backend REST APIs, enabling technicians to view and update data on the go.
- Led migration of legacy Microsoft Access, FoxPro, and Crystal Reports applications to .NET solutions with SSRS reporting and Power BI dashboards, reducing reporting errors and delivering real-time insights to stakeholders.

Cincinnati Software Solutions

Jan 2015 - Dec 2015

Software Developer

Cincinnati, OH

- Built C# data-collection forms using .NET Framework and Entity Framework, and integrated them with SQL Server databases via Git-managed code, which streamlined data entry and reduced manual processing errors.
- Developed native Android applications in Java with Android Studio, using Retrofit to consume RESTful APIs, which improved mobile user access to core services and increased feature adoption.
- Engineered an offline-first biometric fingerprint scanning application utilizing C# and SQLite, enabling the secure capture and matching of identity data without requiring network connectivity.

EDUCATION

University of Cincinnati - Bachelor of Science, Information Technology (Software Application Development)

Cincinnati State Technical & Community College - Associate of Science, Business Programming & Systems Analysis

CERTIFICATIONS

Microsoft Certified: Azure Data Fundamentals - Issued by Microsoft, Jul 2022
